

NAVY TRAINING SYSTEM PLAN

FOR THE

AN/USM-670 JOINT SERVICE

ELECTRONIC COMBAT SYSTEMS TESTER

N78-NTSP-A-50-0208/P

MAY 2003

AN/USM-670 JOINT SERVICE ELECTRONIC COMBAT SYSTEMS TESTER**EXECUTIVE SUMMARY**

The AN/USM-670 Joint Service Electronic Combat Systems Tester (JSECST) provides a functional End-To-End (ETE) test capability to the organizational level of maintenance to determine the status of Electronic Combat (EC) systems installed in operational aircraft. It automatically determines GO/NO-GO status of the EC system with minimal technician interaction. JSECST is used by the Navy on F/A-18A/B/C/D/E/F, F-14B/D, AV-8B, EA-6B ICAP III and E-2C aircraft and will replace the AN/USM-406, AN/USM-638 and augment the AN/USM-482. JSECST is used by the Air Force on F-15A/B/C/D/E plus the F-15C Multi-Stage Improvement Plan (MSIP), A-10A, F-16 (Block 25 and up), AN/ALQ-184, and AN/ALQ-131 Pods. JSECST has reached the Production and Deployment phase of the Defense Acquisition System.

Initial delivery of JSECST for the Navy and Air Force begun in March 2003 and be completed in December 2005. The Navy will receive 185 units and the Air Force will receive 121 units. The Material Support Date and Navy Support Date for JSECST are scheduled for May 2005.

Initial training has been completed. Navy organizational level follow-on training will be provided by Naval Air Maintenance Training Units (NAMTRAU) located at Naval Air Station (NAS) Norfolk, NAS Lemoore, NAS Oceana, Naval Air Maintenance Training Group Detachment NAS Point Mugu, and Naval Air Maintenance Training Marine Unit (NAMTRA MARUNIT) Marine Corps Air Station (MCAS) Cherry Point. Intermediate level follow-on training will be provided by NAMTRAU NAS Lemoore and NAMTRA MARUNIT MCAS Cherry Point.

Organizational level maintenance of EC systems is performed by Navy Aviation Electronics Technicians (AT) with Navy Enlisted Classification (NEC) 83XX, or Marine Corps personnel with Military Occupational Specialty (MOS) 63XX, depending on the particular aircraft being supported. These organizational level technicians will operate and maintain JSECST by performing routine visual inspections, cleaning and lubrication, and running alignment and built-in self-test prior to each test phase. Intermediate level maintenance of JSECST is performed by Navy AT personnel with NEC 6618 and Marine Corps personnel with MOS 6482. Depot level maintenance will be performed by the Original Equipment Manufacturer.

Preliminary assessment of the impact of fielding JSECST indicates no requirement to change existing manpower or skill levels for organizational or intermediate maintenance. Upon receiving training, existing personnel should be able to easily operate and maintain JSECST.

AN/USM-670 JOINT SERVICE ELECTRONIC COMBAT SYSTEMS TESTER

USMC	United States Marine Corps
USN	United States Navy
WRA	Weapon Replaceable Assembly

AN/USM-670 JOINT SERVICE ELECTRONIC COMBAT SYSTEMS TESTER

PREFACE

This Proposed Navy Training System Plan (NTSP) explores the various employment scenarios for the AN/USM-670 Joint Service Electronic Combat Systems Tester (JSECST) program, from here forward referred to as JSECST. This NTSP is the second iteration containing all seven parts and is a product of the Training Planning Process Methodology as outlined in Office of the Chief of Naval Operations (OPNAV) Publication P-751-3-9-97.

PART I - TECHNICAL PROGRAM DATA

A. NOMENCLATURE-TITLE-PROGRAM

1. Nomenclature-Title-Acronym. AN/USM-670, Joint Service Electronic Combat Systems Tester (JSECST)

2. Program Element. N204161N

B. SECURITY CLASSIFICATION

- 1. System Characteristics** Unclassified
- 2. Capabilities** Unclassified
- 3. Functions** Unclassified

C. MANPOWER, PERSONNEL, AND TRAINING PRINCIPALS

OPNAV Principal Official (OPO) Program Sponsor CNO (N781)

OPO Resource Sponsor..... CNO (N781)

Developing Agency NAVAIR (PMA260)

Training Agency COMLANTFLT
COMPAFLT
NETC
COMNAVRESFOR

Training Support Agency..... NAVAIR (PMA205)
COMNAVRESFOR

Manpower and Personnel Mission Sponsor..... CNO (N12)
NAVPERSCOM (PERS-4, PERS-404)

Director Naval Education and Training..... CNO (N00T)

Marine Corps Force Structure..... MCCDC (C53)

D. SYSTEM DESCRIPTION

1. Operational Uses. The AN/USM-670 JSECST provides a functional End-To-End (ETE) test capability at the organizational level of maintenance to determine the status of Electronic Combat (EC) systems installed in operational aircraft. It automatically determines GO/NO-GO status of the EC system with minimal technician interaction. In cases where the EC

system has a critical fault, JSECST identifies the critical failure or the functional test that failed. JSECST will be operated at Air Force Bases, Naval Air Stations (NAS), Naval Air Facilities (NAF), Marine Corps Air Stations (MCAS), overseas bases, aboard aircraft carriers and amphibious assault ships, and at other locations.

Air Force and Navy EC systems comprised of electronic attack pods, electronic attack systems, radar warning receivers, and integrated electronic attack suites have undergone extensive technological advances in signal processing and jamming techniques. The result is an increase in both system testing and support equipment requirements. Increased mobility requirements and the probable co-location of multiple aircraft weapon systems, coupled with a limited support capability drove the requirement for a small, rugged, highly adaptable, and extremely mobile tester.

2. Foreign Military Sales. If Foreign Military Sales (FMS) are initiated, the supportability planning will be contracted through letters of agreement with individual countries. For further information on FMS refer to Program Manager, Air (PMA) 260.

E. DEVELOPMENTAL TEST AND OPERATIONAL TEST. Air Force Developmental Test and Evaluation (DT&E) and Initial Operational Test and Evaluation (IOT&E) was conducted at F-15C Multi-Stage Improvement Program (MSIP) bases. Navy Technical Evaluation (TECHEVAL) was conducted at NAVAIR Point Mugu, California, for fault insertion testing; NAVAIR Patuxent River, Maryland, for F/A-18C; and aboard an aircraft carrier for shipboard suitability testing. Operational Evaluation was conducted at selected shore sites and aboard an aircraft carrier. Testing for JSECST is complete.

F. AIRCRAFT AND/OR EQUIPMENT/SYSTEM/SUBSYSTEM REPLACED. JSECST will replace the AN/USM-406D, AN/USM-638 and augment the AN/USM-482 and AN/USM-482A Radio Frequency (RF) Transmission Line Testers. JSECST fills a void in the current Air Force ETE EC testing capability.

G. DESCRIPTION OF NEW DEVELOPMENT

1. Functional Description. JSECST will provide ETE functional testing capability to determine the status of EC systems installed in or on operational aircraft and provide assistance to maintenance technicians for diagnosing EC system malfunctions. When used in conjunction with Test Program Sets (TPS), JSECST will automatically determine a GO/NO-GO status of the EC system failure and the ETE functional test that failed. JSECST will also provide fault isolation to the failed Weapon Replaceable Assembly (WRA) or aircraft RF Transmission Line component. JSECST can be operated in either the automatic or manual mode to assist in accomplishing fault isolation of failed WRAs. The manual mode will be used when the automatic mode cannot determine the EC system failure or when unique mission requirement is to be evaluated. The JSECST system is comprised of the following major components.

a. Core Test Set, TS-4512/USM-670. The Core Test Set (CTS) utilizes a ruggedized construction and contains the system electronics.

b. Accessory Set, MX-11824/USM-670. The Accessory Set includes an Accessory Case containing the Hand Held Control Unit (HHCU), HHCU control cable, Remote Measurement Unit (RMU), RMU control cable, RMU RF port extension cable, Alternating Current (AC) power cable, and self-test cable.

c. Software Development Station. Under the current contract, two Software Development Station (SDS) will be delivered to the government for TPS development and CTS software maintenance, one to the Air Force and one to the Navy. The SDS is a standard International Business Machine compatible Personal Computer (PC) with removable cards. The software used in the SDS is Commercial Off-The-Shelf (COTS) such as Windows New Technology TM Operating System, Hewlett Packard Test Execution, etc.

2. Physical Description. The following represents the physical and environmental characteristics of JSECST. JSECST consists of two main units.

a. Core Test Set, TS-4512/USM-670

- Dimensions 21.6" High x 17.5" Wide x 25.7" Deep
- Weight..... 98 pounds

b. Accessory Case, MX-11824/USM-670

- Dimensions 13.6" High x 17.5" Wide x 25.7" Deep
- Weight..... 66 pounds

c. Power Requirements. JSECST requires 115 Volts Alternating Current (VAC), 60 or 400 Hertz (Hz), 15 Amps.

d. Temperature Range. JSECST may be operated from -40 to +120.2 degrees Fahrenheit.

3. New Development Introduction. JSECST will be introduced as new production equipment.

4. Significant Interfaces. JSECST interfaces with the aircraft being tested, the WRA in the aircraft being tested, and the aircraft transmission line being used by the WRA and the aircraft.

5. New Features, Configurations, or Material. Not Applicable (NA)

H. CONCEPTS

1. Operational Concept. JSECST will be operated at the organizational level by Navy Aviation Electronics Technician (AT) personnel with Navy Enlisted Classification (NEC) 83XX

(series) or USMC personnel with Military Occupational Specialty (MOS) 63XX (series), depending upon which aircraft is being tested.

2. Maintenance Concept. The Air Force is using a modified two level (organizational and depot) maintenance concept for JSECST. This concept allows the user to have some limited repair and replacement capability at the organizational level. Periodic maintenance and calibration will be accomplished using existing support assets currently in inventory.

The Navy JSECST maintenance concept is in accordance with the Naval Aviation Maintenance Program, Office of the Chief of Naval Operations Instruction (OPNAVINST) 4790.2 series for avionics support equipment. The maintenance concept allows for calibration, test set repair, and Shop Replaceable Assembly (SRA) replacement capability at the intermediate level of maintenance.

a. Organizational. Although organizational level maintenance for Avionics Support Equipment is not authorized by the NAMP, organizational level technicians will perform routine visual inspections, clean and lubricate the unit, and run alignment and built-in, self-tests prior to each test phase.

b. Intermediate. Intermediate level maintenance will be performed in Work Center 640. Tasks to effect repair of JSECST include calibration and diagnostic testing using built-in self-test, Operational Assurance/Fault Isolation and manual intervention methods to fault isolate, and removal and replacement of discrepant SRAs and failed components. A Calibration and Maintenance Disk Drive, Part Number (97384) 37534-40396-10, NSN 1RW4920-01-498-2561EW, has been identified as an Individual Material Readiness List (IMRL) item to support JSECST and is required to perform Test Set calibration and fault isolation.

c. Depot. AAI Corporation is the Original Equipment Manufacturer (OEM) and is identified as the commercial depot for repair of component parts that are beyond the capability of the intermediate level of maintenance. A contract was placed with AAI Corporation in March 2002 for these services.

d. Interim Maintenance. In addition to the depot repair determination outlined above, the Navy and Air Force have entered into a 10-year Performance Based Logistics contract with AAI Corporation with the contract period of performance to be March 2003 through April 2013.

e. Life Cycle Maintenance Plan. JSECST will meet the organizational level support equipment requirements of electronic combat systems for service up to a 20-year life cycle. The OEM is identified as the commercial depot for repair of component parts that are beyond the capability of the intermediate level of maintenance.

3. Manning Concept. The Air Force has directed that organizational level maintenance and calibration on the JSECST be performed by personnel in Air Force Specialty Code (AFSC) 2P051, Precision Measurement Equipment (PME), and AFSC 2A051A/B.

The Navy JSECST will be operated at the organizational level by Navy personnel in the AT rating with NEC 83XX or Marine Corps personnel with MOS 63XX, depending upon which aircraft is being tested. Introduction of the AN/USM-670 will not drive an increase or decrease in manpower at the organizational level.

AIRCRAFT	NEC	MOS
F/A-18A/B/C/D	8342	6317
F/A-18E/F	8341	NA
F-14B	8345 8845	NA
F-14D	8335 8835	NA
AV-8B	NA	6312
E-2C	8306 8806	NA
EA-6B ICAP III	8332 8832	6386

JSECST will be calibrated and maintained in Work Center 640 by Intermediate Maintenance personnel with NEC 6618 and USMC Aircraft Electronics Countermeasures Systems Technician, Fixed Wing Intermediate Maintenance Activity personnel in the 6482 MOS. These are the same personnel currently operating and maintaining the AN/USM-406D. Introduction of JSECST will not drive an increase or decrease in manpower at the intermediate level.

a. Estimated Maintenance Man-Hours per Operating Hour

PARAMETER	THRESHOLD	OBJECTIVE
Mean Time Between Operational Failures	500 hours	1,000 hours
Mean Corrective Maintenance Time	40 minutes	20 minutes
Operational Availability	90 %	98 %

b. Proposed Utilization. JSECST will be operated at the organizational level of maintenance for the F-14B/D, F/A-18A/B/C/D/E/F, E-2C, EA-6B Increased Capability (ICAP) III and the AV-8B aircraft. Peacetime utilization rate will be 120 hours monthly. Wartime utilization rate will be 240 hours monthly.

c. Recommended Qualitative and Quantitative Manpower Requirements.

All manpower required to operate and maintain JSECST is currently in place at the organizational and intermediate levels of maintenance.

4. Training Concept. The goal of JSECST system training concept is to provide qualified organizational and intermediate level Air Force, Marine Corps, and Navy personnel ashore and afloat, with the qualifications to ensure that EC systems are in a GO status prior to aircraft take-off. For reserve program units, Training and Administration of Reserves (TAR) personnel receive their training through attending the applicable training, while Selected Reserve (SELRES) personnel may earn maintenance qualifications by attending formal training providing quotas, funding, and students are available to attend the training. Specific guidelines for Navy and Marine Corps personnel are contained in Naval Personnel (NAVPERS) 18068F Volume II, Chapter IV.

a. Initial Training. Initial training for the JSECST to support Engineering and Manufacturing Development, Operational Testing, and Maintenance Training Unit (MTU) Naval Air Maintenance Training Unit (NAMTRAU) and Naval Air Maintenance Training Marine Unit (NAMTRA MARUNIT) instructors was completed between October 1999 and May 2000.

b. Follow-on Training. Organizational level follow-on training is available at various locations as depicted below. For more information on individual aircraft training refer to the applicable NTSP listed in paragraph M of this document.

TYPE AIRCRAFT	TRAINING ACTIVITY	LOCATION
F/A-18A/B/C/D	MTU 1039	NAMTRAU Oceana
	MTU 1038	NAMTRAU Lemoore
F/A-18E/F	MTU 1038	NAMTRAU Lemoore
F-14A/B	MTU 1007	NAMTRAU Oceana
F-14D	MTU 1007	NAMTRAU Oceana
AV-8B	(NAMTRA MARUNIT)	MCAS Cherry Point
E-2C	MTU 1026	NAMTRAU Norfolk
	MTU 1025	NAMTRAGRU DET Point Mugu

TYPE AIRCRAFT	TRAINING ACTIVITY	LOCATION
EA-6B ICAP III	MTU 1083	NAMTRAU Whidbey Island

All current organizational level maintenance courses are in the process of integrating Computer-Based Training (CBT) with its basic elements of Computer-Managed Instruction (CMI), Computer-Aided Instruction (CAI), Interactive Courseware (ICW), and Aviation Maintenance Training Continuum System (AMTCS) Electronic Modules, into their curricula for classroom presentation and management. For specifics on exactly when a particular aircraft platform will be integrated refer to the applicable NTSP listed in paragraph M of this NTSP.

All of the organizational maintenance training courses below listed are currently available without the AN/USM-670 JSECST. JSECST will be delivered to each training activity for inclusion in the following courses. Addition of JSECST will not increase course lengths.

Title E-2C Group 2 AEW Systems (Career) Organizational Maintenance

CIN D/E-102-0325

Model Manager.... NAMTRAU Norfolk

Description..... This course provides training to the second tour Aviation Electronics Technician, including:

- ° Theory of Operation
- ° Systems Operation and Analysis
- ° Troubleshooting Techniques
- ° Equipment Repair
- ° Publications Interpretation
- ° Safety Procedures

Upon completion, the graduate will be able to safely perform organizational maintenance on the E-2C Avionics Systems in a squadron environment under limited supervision.

Locations ° MTU 1026 NAMTRAU Norfolk
° MTU 1025 NAMTRAGRU DET Point Mugu

Length 114 days

RFT date Currently available without JSECST (JSECST to be delivered in 2003)

Skill identifier NEC 8306

TTE/TD..... Refer to the E-2C NTSP for this information

Prerequisite D-102-0328, E-2C Group 2 AEW Systems (Initial)
Organizational Maintenance

**Title E-2C Group 2 AEW Systems (Initial) Organizational
Maintenance**

CIN D/E-102-0328

Model Manager.... NAMTRAU Norfolk

Description..... This course provides training to the first tour Aviation
Electronics Technician, including:
 ° Theory of Operation
 ° Systems Operation and Analysis
 ° Publications Interpretation
 ° Safety Procedures
Upon completion, the graduate will be able to safely
perform organizational maintenance on the E-2C Avionics
Systems in a squadron environment under direct
supervision.

Locations ° MTU 1026 NAMTRAU Norfolk
° MTU 1025 NAMTRAGRU DET Point Mugu

Length..... 72 days

- ° System Operation and Analysis
- ° Troubleshooting Techniques
- ° Equipment Repair
- ° Publications Interpretation
- ° Safety Procedures

Upon completion, the graduate will be able to safely perform organizational maintenance on the EA-6B Avionics Systems in a squadron environment under limited supervision.

Location NAMTRAU Whidbey Island

Length 47 days

RFT date Currently available without JSECST

Skill identifier MOS 6386

TTE/TD..... Refer to the EA-6B NTSP for this information

Prerequisite C-100-2018, Avionics Technician O Level Class A1
C-100-2020 Avionics Common Core Class A1

Intermediate level follow-on training for JSECST will be available at NAMTRA MARUNIT MCAS Cherry Point NAMTRAU NAS Lemoore beginning in July 2003. *C-102-4058, AN/USM-670 Electronic Test Set (JSECST) Operator/Maintainer Course* is a stand-alone course. Although this course does not award an NEC or MOS, Navy AT personnel with NEC 6618 and USMC personnel with MOS 6482 will attend this course. The Training Course Control Document (TCCD) is currently being prepared at Naval Air Technical Training Center (NATTC) in Pensacola, Florida, and is not included in this NTSP. This information will be included into the next update of this document.

Title **AN/USM-670 Electronic Test Set (JSECST)**
Operator/Maintainer Course

CIN C-102-4058

Model Manager.... NAMTRA MARUNIT MCAS Cherry Point

Description..... This course provides training to the USN and USMC intermediate level Aviation Electronics Technician, including:

- ° Theory of Operation
- ° System Operation and Analysis
- ° Troubleshooting Techniques
- ° Equipment Repair
- ° Publications Interpretation
- ° Safety Procedures

Upon completion, the graduate will be able to safely perform as an Electronic Combat Test Set Operator/Maintainer in a shop environment under limited supervision.

Locations ° NAMTRA MARUNIT MCAS Cherry Point
° MTU 1038 NAMTRAU Lemoore

Length..... 19 days

RFT date December 2003

Skill identifier None

TTE/TD..... Various Electronic Combat Systems are used for TTE

Prerequisite C-100-2017, Avionics Technician I Level Class A1

c. Student Profiles

SKILL IDENTIFIER	PREREQUISITE SKILL AND KNOWLEDGE REQUIREMENTS
AT 6618	C-100-2017, Avionics Technician I Level Class A1 C-100-2020, Avionics Common Core Class A1
MOS 6482	C-100-2017, Avionics Technician I Level Class A1 C-100-2020, Avionics Common Core Class A1

d. Training Pipelines. There is no new training track or pipeline required. JSECST requires the intermediate level stand-alone course, *C-102-4058*, as shown above.

I. ONBOARD (IN-SERVICE) TRAINING. Onboard training is defined by each individual aircraft platform. For specifics on aircraft platform onboard training, refer to the applicable NTSP listed in paragraph M of this NTSP.

1. Proficiency or Other Training Organic to the New Development

a. Maintenance Training Improvement Program. NA

b. Aviation Maintenance Training Continuum System. The Aviation Maintenance Training Continuum System (AMTCS) will provide career path training to the Sailor or Marine from their initial service entry to the end of their military career. AMTCS is planned to be an integrated system that will satisfy the training and administrative requirements of both the individual and the organization. The benefits will be manifested in the increased effectiveness of the technicians and the increased efficiencies of the management of the training process. By capitalizing on technological advances and integrating systems and processes where appropriate, the right amount of training can be provided at the right time, thus meeting the Chief of Naval Operations (CNO) mandated “just-in-time” training approach.

Technology investments enable the development of several state-of-the-art training and administrative tools: Computer-Based Training for the technicians in the fleet in the form of Interactive Courseware with Computer-Managed Instruction and Computer-Aided Instruction for the schoolhouse.

Included in the AMTCS development effort is the AMTCS - Software Module which provides testing (Test and Evaluation), recording (Electronic Training Jacket), and a feedback system. The core functionality of these AMTCS tools are based and designed around the actual maintenance-related tasks the technicians perform, and the tasks are stored and maintained in a Master Task List data bank. These tools are procured and fielded with appropriate COTS hardware and software, Fleet Training Devices (laptop computers, desktop computers, electronic classrooms, Learning Resource Centers, operating software, and network software and hardware).

Upon receipt of direction from OPNAV (N789H), AMTCS is to be implemented and the new tools integrated into the daily training environment of all participating aviation activities and supporting elements. AMTCS will serve as the standard training system for aviation maintenance training within the Navy and Marine Corps, and is planned to supersede the existing Maintenance Training Improvement Program and Maintenance Training Management and Evaluation Program (MATMEP) programs. AMTCS implementation will begin with the F-14, E-2C, and all models of the F/A-18 aircraft. For more information on AMTCS refer to PMA205. Currently, PMA205 is in the process of identifying intermediate level candidates for AMTCS development.

2. Personnel Qualification Standards. NA

3. Other Onboard or In-Service Training Packages. Marine Corps onboard training is based on the current series of MCO P4790.12, Individual Training Standards System and Maintenance Training Management and Evaluation Program (MATMEP). This program is designed to meet Marine Corps, as well as Navy OPNAVINST 4790.2 series maintenance

training requirements. It is a performance-based, standardized, level-progressive, documentable, training management and evaluation program. It identifies and prioritizes task inventories by MOS through a front-end analysis process that identifies task, skill, and knowledge requirements of each MOS. MATMEP identifies training deficiencies that can be enhanced with refresher training. (MATMEP will be replaced by AMTCS.

J. LOGISTICS SUPPORT

1. Manufacturer and Contract Numbers. The Air Force is the procuring activity for JSECST. AAI Corporation is the OEM and is identified as the commercial depot for repair of component parts that are beyond the capability of the intermediate level of maintenance. A contract for these services was placed with AAI Corporation in March 2002.

CONTRACT NUMBER	MANUFACTURER	ADDRESS
F33657-95-C-0077	AAI Corporation	P.O. Box 126 Hunt Valley, MD 21030-0126

2. Program Documentation. Documentation available for JSECST includes:

- Logistics Support Analysis (LSA) (MIL-STD-1388-1A/2B)
- Test and Evaluation Master Plan dated August 1995
- Integrated Logistics Support Strategy dated October 1999
- JSECST Brief, Initial Operational Capability Supportability Review dated October 2001

3. Technical Data Plan. Technical publications to support JSECST are currently available. Technical manuals for JSECST are:

- NAVAIR 16-30USM-670-4, Illustrated Parts Breakdown (IPB)
- NAVAIR 16-30USM-670-2, Maintenance Instructions
- NAVAIR 16-30USM-670-1, Operations Instructions

4. Test Sets, Tools, and Test Equipment. No special tools are required to operate or maintain JSECST at the organizational maintenance level.

5. Repair Parts. The Material Support Date (MSD) and the Navy Support Date (NSD) for JSECST is scheduled for May 2005. Prior to the MSD all parts required will be provided by the OEM.

6. Human Systems Integration. The JSECST fills a Navy operational requirement for a small, adaptable, and highly mobile tester capable of verifying system level performance of installed electronic countermeasures systems installed in today's most advanced aircraft.

JSECST provides an organizational-level flight line capability for verifying operational status of aircraft-installed electronic combat systems including group A antennas and transmission lines. JSECST allows technicians to perform true end-to-end RF tests, a breakthrough over past aging, unreliable and expensive test equipment capability that the AN/USM406D could not provide.

The acquisition strategy was to bypass the demonstration/validation phase and proceed directly into Engineering and Manufacturing Development. In order to support this strategy, the program office assessed current industry capability to develop the JSECST. All new design systems and software address the human-machine interface for operators, maintainers, and support personnel. The design processes conformed to standard human engineering practices as defined in existing human factors engineering design standards. All new hardware and software will minimize the requirement for special cognitive, physical, or sensory requirements of the operators, maintainers, or support personnel beyond those available in current Navy/Marine Corps personnel resources. The system safety was addressed in a safety analysis report, which included electrical safety, radio frequency emissions, and general issues with regard to weight, balance and corners in accordance with MIL-STD-1472, and no major issues were identified. The core test set case has a weight of ~94 pounds which will require a two-man lift. The core test set accessory case has a weight of ~66 pounds which will also require a two-man lift. System utility and operating protocols are in conformance with expectations of user population.

This system has no habitability impact. Manpower issues are covered in part II and III of this document.

The curricula delivery method that will be employed to teach this course will be a blend of platform instruction along with computer aided instruction. All CBT, CAI and ICW training material will be sharable content object reference model compliant. A breakdown has yet to be determined since the training project plan is currently being developed.

In its current state of design, the JSECST system contains no explosive, radioactive, or carcinogenic materials. Toxic materials, as documented in Section 6 of the safety assessment report, are present in small amounts and in forms that present no hazard during any phase of system ownership, including disposal. If the unit were to be incinerated, limited amounts of corrosive vapors would be generated by the decomposition of wire insulation. This is common to all electronic equipment meeting the requirements to operate in the specified environments. Environmental and Occupational Safety and Health requirements meet federal, state, and local standards, regulations, and directives and are enforced by respective agencies, as applicable.

K. SCHEDULES

1. Installation and Delivery Schedules. The Navy requires a total of 185 JSECST units with deliveries beginning in 2003 and will be ending in 2005. The Air Force requires a total of 121 JSECST units, with deliveries that will begin in 2003 and will be ending in 2005.

NAVY/USMC EC SYSTEMS SUPPORTED BY JSECST

**COMMENTS / RECOMMENDATIONS ON THE
PROGRAM TITLE
DRAFT NAVY TRAINING SYSTEM PLAN**

ACTIVITY NAME: OPNAV N00T

COMMENT: Section I page I-17, J6. Human Systems Integration.

HSI should never be identified as Not Applicable. Throughout the acquisition process HSI is a factor. Even during Sustainment of a weapon/equipment HSI is always considered (including ECPs). The HSI section must be rewritten to discuss the nine HSI elements and describe how these elements are being addressed/considered for the design of the system including ECPs and other modifications. The nine HSI elements (manpower, personnel, training, habitability, personnel survivability, health, safety, environmental, and human factors) are focused on enabling, enhancing, supporting and maintaining required levels of human performance capability in systems. In order to accomplish this there must be a synergistic mutual interrelationship between among all of the HSI elements that extends from system conceptual development through detail design. The trade-off decisions made by the Weapon System Program Manager have a direct impact on how the training will be designed, how many people are required and what MOSs are affected. MPT are the three HSI elements that will always bear the burden of a weak system design. It is imperative that these impacts are reflected in the design, implementation and evaluation of the total training system.

INCORPORATED: *YES*

REMARKS: *NONE*

ACTIVITY NAME: CNATT HPC

COMMENT: Section I, page I-17, J6. Human Systems Integration.

This is not acceptable. The program must assess the HSI impacts (all nine of its elements) of the system. The Test and Accessory case weight is 154 lbs, suggesting at least a HFE and Safety analysis should be performed. Additionally, any CBT/WBT courseware must be SCORM compliant

ACTIVITY NAME: CNATT

COMMENT: All pages that indicate that the JSETCST to be delivered March 2003, must be updated. It is unknown by NAMTRAGRUHQ when the different NAMTRAU will receive equipment. Request this date be updated by NAVAIR.

INCORPORATED: YES

REMARKS: NONE

ACTIVITY NAME: CNATT

COMMENT: Section I, page I-9 - course length for E-102-0624 should be 52 vice 39 days
Section I, page I-12 - course length for D-102-1624 should be 72 vice 73 days
Section I, page I-12 - course length for D-102-1625 should be 67 vice 66 days
Section I, page I-13 - course length for D-102-1630 should be 31 vice 44 days
Section I, page I-14 - course length for M-102-0122 should be 109 vice 110 days

INCORPORATED: NO

REMARKS: All dates were obtained from OATMS and have been verified to be correct.

ACTIVITY NAME: CNATT

COMMENT: Section I, page I-14 - Training Course Control Document (TCCD) referred to on bottom page will be prepared by NAMTRAGRUHQ not Naval Air technical Training Center (NATTC). Additionally the Training project plan for C-102-4058 has not been submitted, which comes before the TCCD.

INCORPORATED: YES

REMARKS: NONE

ACTIVITY NAME: CNATT

COMMENT: Section I, page I-15 - course C-102-4058 RFT date will not be July 2003, UNK when it will be ready. Suggest Dec 2003 as RFT date.
